

Question 1: Basic HTML Structure [4 Points]

a) HTML Skeleton [2 Points]

- Create a basic HTML page with the following structure:
 - A `<header>` section with a site logo (text or image) and a navigation menu with at least three links.
 - A `<main>` section with an `<article>` element that includes a heading (`<h1>`) and a few paragraphs (`<p>`) of placeholder text.
 - A `<footer>` section with some contact information.

b) Semantic HTML [2 Points]

- Ensure that all sections of the HTML page use appropriate semantic tags (`<header>`, `<nav>`, `<main>`, `<article>`, `<footer>`).
 - Include a `title` for the page in the `<head>` section.
-

Question 2: Styling with CSS [6 Points]

a) Basic Styling [2 Points]

- Apply basic styling to the HTML page:
 - Set a background color for the entire page.
 - Style the header with a different background color and center the logo and navigation links.

- Set a font style (e.g., **Arial**, **Verdana**) for the entire page.

b) Layout and Positioning [2 Points]

- Use CSS Flexbox or Grid to create a responsive layout:
 - The header should be displayed as a horizontal bar with the logo on the left and the navigation links on the right.
 - The footer should stick to the bottom of the page, even when content is minimal.

c) Advanced Styling [2 Points]

- Add hover effects to the navigation links and buttons:
 - Change the background color and text color when the user hovers over the links.
 - Ensure that these hover effects are smooth (use **transition**).
-

Question 3: Interactive JavaScript Features [10 Points]

a) Navigation to a Separate Page [4 Points]

Task:

- Implement a feature where clicking a button on the main page navigates the user to a new page.
 - The new page should display a simple message or form.
 - The page should have a "Back" button that returns the user to the main page.
 - Style the new page so that it provides a clear and user-friendly interface, distinct from the main page.
-

b) Form Validation [3 Points]

Task:

- Create a simple contact form on the new page with fields for name, email, and message.
 - Use JavaScript to validate that all fields are filled out before submission.
 - Ensure that the email field contains a valid email format.
 - If validation fails, display an error message below the form fields.
-

c) Dynamic Content Update [3 Points]

Task:

- On the main page, add a feature that allows the user to add new content dynamically.
- Include a button that says "Add New Article".
- When the button is clicked, use JavaScript to clone the existing article and append it to the main section with updated content.
- Ensure that each newly added article has a unique ID.

Welcome to Our Site

This is a paragraph of placeholder text.

Here's another paragraph with more placeholder text.

New Article 2

This is a new article with some placeholder text.

More content for the new article.

New Article 3

This is a new article with some placeholder text.

More content for the new article.

Notes:

- **Submission:** Please submit your code as a `.zip` file containing the HTML, CSS, and JavaScript files.
- **Evaluation Criteria:**
 - Proper use of semantic HTML elements.
 - Clean and responsive CSS design.
 - Functional and user-friendly JavaScript interactions.
